DESIGN SYSTEM V1.0

FROM INSIGHT TO IMPACT.

V■yas Life — Interactive Case Study Website

Editorial Luxury · Balanced Interactive · Typography-led Hero

FINAL DESIGN SPECIFICATION

This document records the approved visual system, page architecture, interaction behaviour, responsive rules, and implementation acceptance criteria. It is the design reference to follow before writing code.

TOKEN	HEX	APPLICATION
Forest	#142C25	Hero, footer, dark feature panels
Ivory	#F5F0E5	Main background
Sage	#D7E2D2	Supporting panels and highlights
Yellow	#E7C45B	Small accents, arrows, active states
Ink	#202923	Main text on light backgrounds
Muted	#69736B	Secondary text and captions

1. Visual Identity

The site should feel like a boutique creative agency documenting a serious piece of strategic work. It should be distinctive without letting visual effects compete with the research, reasoning, or video concepts.

Typography

- **Display:** Space Grotesk, bold, tight headline spacing.
- **Body:** Inter, regular to medium weight.
- **Labels:** Inter, uppercase with generous letter spacing.
- Use large type sparingly; explanatory text must stay comfortable to read.

Layout rules

- Maximum content width: approximately 1,280px.
- Desktop side margins: 6–8vw, adjusted for screen size.
- Section spacing: approximately 100–140px on desktop and 64–88px on mobile.
- Use a 12-column desktop grid that collapses naturally on mobile.
- Cards use restrained corner radii and subtle borders, with no excessive shadows.
- Use original advertising screenshots and actual generated video files—no stock imagery or substitute competitor creatives.

2. Final Page Architecture

00 — Hero

Typography-led opening: forest-green background, oversized “FROM INSIGHT TO IMPACT.”, compact navigation, subtle headline reveal, and a scroll cue. No autoplaying hero video.

01 — The Brief

Introduce assignment context, product overview, and the two workstreams: competitive creative research and original video-ad concept development. Distinguish the assignment brief from your own interpretation.

02 — Research

Separate static and video competitor research. Use selected original assets, scores, source links, and concise creative analysis.

03 — The Insight

Summarise patterns: life-stage relevance, formulation clarity, focused propositions, emotional relevance without benefit overload, and premium presentation with a specific reason to choose.

04 — Creative Lab

Three interactive concept cards reveal audience, core insight, hook, narrative, product integration, creative rationale, and a link to the finished execution.

05 — The Films

Large responsive players for the three actual videos, custom poster frames, visible playback controls, captions where available, and a concise creative breakdown.

06 — Next Steps

Show testing hypotheses, links to both requested PowerPoints and PDFs, and separate video sample links where useful.

3. Research Section Behaviour

Static ads

Show five original screenshots: Earthful, Origins Nutra, Zanskar, SwissLife Forever, and Swisse. Each card shows brand, subjective score out of 25, and a short creative-territory label.

On click, open an accessible lightbox showing the larger original ad, “Why it works,” “Why it doesn’t,” “Takeaway for V■yas,” and the correct clickable Meta Ad Library source.

Static scores

Brand	Score	Creative territory
Earthful	19/25	Life-stage relevance
Origins Nutra	18/25	Formulation clarity
Zanskar	17/25	All-in-one proposition
SwissLife Forever	17/25	Emotional benefit
Swisse	16/25	Premium trust

Video ads

Show the five selected actual competitor video assets: Zanskar, Earthful, Restore Joint, LightYears Health, and The Body Reserve. Each item includes the score, opening hook, narrative, product integration, main weakness, and learning for V■yas. Use the finalized video scores and approved source links from the research material.

All scores must be labelled subjective creative assessments, not performance data.

4. Strategic Insight

Headline: “The opportunity is not to copy the category. It's to make a clearer choice.”

Present the following creative patterns as a visual progression:

- Life-stage relevance.
- Formulation clarity.
- A memorable, focused proposition.
- Emotional relevance without benefit overload.
- Premium presentation with a specific reason to choose.

Strategic hypothesis to test

For V■yas, explore women-specific context, one clear product promise, and a simple explanation of the formulation.

Label this as a creative hypothesis to test, not a proven winning strategy.

5. Creative Lab

Headline: “Three concepts. Three different creative routes.”

Concept 01 — Cinematic

Your Body Changes. Your Nutrition Should Too.

A life-stage-led story about how routines and priorities evolve.

Concept 02 — Social-native

The 30+ Checklist

A fast, text-driven creative built around the priorities that compete for attention after 30.

Concept 03 — Emotional

Take Care of What Carries You.

A movement-led story connecting everyday responsibilities with the idea of daily nutritional support.

On interaction, reveal the intended audience, core insight, opening hook, narrative and product integration, creative rationale, and link to the finished execution.

6. Films and Playback

- Display all three actual videos in large, responsive players.
- Use a custom poster frame for each video.
- Include visible play controls and captions where available.
- Allow inline playback or a focused modal.
- Never autoplay with sound.
- Add a concise explanation of the creative choices below each player.
- Label these as concept executions, not tested performance winners.
- Use real video files or properly hosted video URLs; do not render fake player interfaces.

7. Interaction Specification

Element	Required behaviour
Navigation	Sticky, with active section indication.
Scroll progress	Thin progress indicator at the top.
Section reveals	Subtle opacity/position transitions.
Competitor cards	Hover treatment on desktop; clear tap behaviour on mobile.
Ad lightbox	Large image, analysis, source link, close button, Escape-key support.
Concept cards	Click or keyboard activation reveals concept details.
Video players	Real playback controls, responsive sizing, captions if available.
Source links	Open original Meta Ad Library URL in a new tab.
Downloads	Download or open the real deliverable files.
Mobile navigation	Compact menu with accessible controls.

Motion rules

- Use short, restrained transitions, generally around 180–350ms.
- Use scroll-triggered reveals once per section rather than on every small element.
- Avoid parallax that interferes with reading.
- Respect prefers-reduced-motion.
- No cursor-following effects, excessive floating elements, animated counters, or scroll-jacking.
- Every interactive element must have a real action and a visible focus state.

8. Responsive Behaviour

Desktop: Asymmetrical layouts, 2–3-column grids, spacious typography, sticky navigation, and larger video players.

Mobile: Single-column flow, smaller headlines, touch-friendly controls, vertically stacked ad analysis, and full-width video players.

Test at approximately 375px, 768px, 1024px, and 1440px viewport widths. Avoid horizontal overflow, overlapping text, and clipped controls.

9. Technical Requirements

- Use a maintainable modern frontend stack compatible with Vercel; a good default is Next.js, TypeScript, Tailwind CSS, and a small motion library if needed.
- Use reusable components for ad cards, analysis panels, concept cards, video players, navigation, and lightboxes.
- Keep media assets organised in a predictable /public structure.
- Use descriptive filenames and preserve source links.
- Optimise images without changing original creative content.
- Lazy-load below-the-fold media.
- Avoid heavy animation libraries if CSS can do the job.
- Use semantic HTML, keyboard-accessible controls, descriptive alt text, and adequate contrast.
- Add page title, metadata, and a social-sharing preview.
- Ensure the site can be built and deployed on Vercel without relying on local-only paths.

10. Final Acceptance Criteria

- The first screen immediately communicates “FROM INSIGHT TO IMPACT.”
- The website feels premium, editorial, and deliberately art-directed.
- Research, insights, concepts, and execution connect in a clear narrative.
- All ten competitor analyses use the actual selected assets and approved sources.
- The three original videos are playable.
- The requested PPTs and PDFs are accessible.
- Every interaction works with mouse, keyboard, and touch.
- Mobile and desktop layouts both feel intentional.
- No fake performance metrics or unsupported product claims appear.
- The design makes the work more impressive without hiding the substance.

FINAL DESIGN DECISION

Lock this system before writing code. The next stage is to assemble the real assets and create the master Claude implementation prompt—not to add more visual styles or extra features.
